

HEMPEL PAINT

Since 1915, under the motto "QUALITY AND SERVICE THROUGHOUT THE WORLD", HEMPEL'S MARINE PAINTS have dedicated their efforts to serving the merchant fleets of the world with durable marine coatings, from keel to masthead.

PRIMER

HEMPALIN PRIMER 1205 is a quick-drying zinc phosphate primer based on long oil alkyd and urethane alkyd. Contains no lead or chromate pigments.

General purpose primer on exterior and interior steel in mild to moderately corrosive marine and industrial atmosphere. Not suited for permanent immersion or in association with impressed current cathodic protection.

CTG 546 Red 1205 1 Gal.

CTG 551 Red 1205 5 Gal.

HEMPALIN TAR 1628 is based on a blend of high quality coal tar pitch and vinyl resin. Physically drying. Resistant to salt water. Limited resistance to aromatics including some types of gasoline, etc. Applicable at low temperature it offers a suitable alternative to coal-tar epoxy where temperature restrictions preclude the use of the latter.

General purpose for protection of permanently submerged steel and of steel surfaces not exposed to sunlight, e.g. ships' bottoms, offshore structures, ballast tanks, inside hatch covers, etc.

CTG 536 TAR BRONZE 1628 5 GAL.

CTG 541 TAR BLACK 1628 5 GAL.

THINNER

HEMPEL'S PAINTS are delivered ready for application by brush or airless spray. If the paint is too thick, e.g. in cold weather or for special purpose, the THINNER(S) indicated under this heading may be added to give the desired viscosity. The amount of thinner to be added depends on prevailing temperature, wind, spray method. Too much thinning will lead to a poor result. For most of the two-component, solventborne products the indicated THINNER can be used for rinsing the CURING ANENT can.

Adding a small percentage of THINNER will give no measurable difference in film thicknesses. There are cases, however, when a higher degree of thinning is necessary if justified. It should then be kept in mind that adding THINNER increases the quantity of liquid paint without contributing to the solids content. Consequently, a proportionally higher wet film must be applied when adding any significant amount of THINNER in order to obtain the desired dry film thickness.

CHM 519 823 1 Gal.

CHM 521 808 1Gal.

CHM 530 846 5 Gal.

HEMPEL PAINTS

HEMPALIN ENAMEL 5214 is an alkyd enamel with good gloss and color retention and weather resistance. It is flexible and resistant to salt water, mineral oils and other aliphatic hydrocarbons.

Recommended use as a general purpose finishing coat on exterior and interior steel and woodwork in mild to moderately corrosive industrial and marine environment.

CTG 301	Hempalin Black	1 Gal.	CTG 306	Hempalin White	1 Gal.
CTG 303	Hempalin Yellow	1 Gal.	CTG 311	Hempalin White	5 Gal.
CTG 304	Hempalin Lt. Green	1 Gal.	CTG 326	Hempalin Safety Red	1 Gal.
CTG 305	Hempalin Lt. Green	5 Gal.	CTG 331	Hempalin Safety Red	5 Gal.

HEMPEL'S PYRALIN 5658 is a heat-resistant aluminium paint based on hydrocarbon resin. Its special effect is only obtained above approx. 400 C/750 F, and the paint is not suited for temperatures below 400 C/750 F, unless the coated surface has been previously heated to higher temperatures.

Recommended use for coating of pipes and other interior steel surfaces in the temperature range 400-500 F. Not indicated for other purposes.

CTG 300 Pyralin Heat Res. 1 Gal.

HEMPALIN DECK PAINT 5324 is a quick-drying styrenated alkyd paint. Hardwearing and resistant to sunlight and salt water, and to oil splash, but not to aromatic hydrocarbons, such as certain types of petrol (gasoline).

Recommended use as a general purpose finishing coat on steel decks, steel and concrete floors, stairways, footbridges, indoors and outdoors, in mildly to moderately corrosive marine and industrial environment.

CTG 316	Hempel Deck Gray	5 Gal.
CTG 321	Hempel Green	5 Gal.
CTG 323	Hempel Deck Red	5 Gal.

RUST TOUGH ... THE FAST DRYING ENAMEL THAT DELIVERS RUST PROTECTION WITH DURABLE GLOSS RETENTION.

- Advanced formula to provide superior protection against rust on any primed or unprimed surface. Ideal for iron, steel, wood, masonry, and marine use.
- All topcoats and primers are formulated with rust inhibitors.
- Exceptional corrosion resistance on both primed and unprimed metal.
- Faster dry times than conventional rust-resisting paints.
- Outstanding initial gloss and outstanding gloss retention.
- Excellent resistance to moisture, scratches and abrasions.
- Exceptional ease of application.
- High volume solids bulk formulas for one-coat hiding, more square feet per gallon.
- Low V.O.C. rating
- Colors match from aerosols to bulk, and from batch to batch.
